CHAPTER 1 INTRODUCTION

CHAPTER 2 FLUID PROPERTIES AND DEFINITIONS

2.1	Definition of a Fluid	10-3
2.2	Types of Fluids	10-3
2.3	Fluid Properties	10-4

CHAPTER 3 HYDROSTATICS

3.1	Pascal's Law of Fluid Pressure	10-11
3.2	General Differential Equation of Hydrostatics	10-11
3.3	Fluid Forces on Submerged Plane Surface Areas	10-11
3.4	Fluid Forces on Curved Surfaces	10-14
3.5	Buoyancy	10-14
3.6	Stresses in Cylinders Due to Internal Pressure	10-15

3.7	Example Problems	10-16
3.7.1	Example Problem 1 — Differential Head	10-16
3.7.2	Example Problem 2 — Steel Tank with Bottom Hinge	10-18

CHAPTER 4

BASIC CONCEPTS OF FLUID FLOW

4.1	Types of Flow	10-21
4.2	The Equation of Continuity	10-21
4.3	General Energy Equation	10-22
4.4	Bernoulli Equation	10-23
4.5	Power	10-23
4.6	Energy and Hydraulic Grade Lines	10-23
4.7	Impulse and Momentum	10-24
4.8	Correction Factors	10-25
4.8.1	Typical Values of Correction Factors	10-26
4.9	Example Problem	10-27
4.9.1	Example Problem 1 — Flow Rate of Oil in Pipe	10-27

CHAPTER 5

FLUID FLOW THROUGH PIPES

5.1	Definitions	10-29
5.1.1	Laminar Flow	10-29
5.1.2	Turbulent Flow	10-29
5.2	Darcy-Weisbach Equation	10-30
5.3	Friction Factor, f	10-31
5.4	Example Problems	10-34
5.4.1	Example Problem 1 — Flow Rate of Oil	10-34
5.4.2	Example Problem 2 — Flow Rate in a Pipe	10-36
5.5	Hazen-Williams Equation	10-38
5.6	Manning Equation	10-41
5.7	Minor Losses	10-44
5.8	Example Problem	10-48
5.8.1	Example Problem 1 — Elevation of HGL and EGL	10-48
5.9	Pipes in Series, Pipes in Parallel, Equivalent Pipes, Branching Pipes and Pipe Networks	10-51
5.9.1	Pipes in Series	10-51
5.9.2	Pipes in Parallel	10-52
5.9.3	Equivalent Pipes and Systems	10-52
5.9.4	Branching Pipes	10-53
5.9.5	Pipe Networks	10-53

5.10	The Hardy-Cross Method	10-54
5.11	Example Problems	10-56
5.11.1	Example Problem 1 — Hardy-Cross Method	10-56
5.11.2	Example Problem 2 — System Discharge	10-57
5.12	P. E. Problem	10-59
5.12.1	P. E. Problem 1 — Reservoirs	10-59
5.13	Hydraulic Power Conversion — Pumps and Turbines	10-60
5.13.1	Efficiency of Pumps and Turbines	10-60
5.13.2	Characteristic Constants of Pumps and Turbines	10-61
5.13.3	Pumps in Parallel	10-62
5.13.4	Pumps in Series	10-64
5.14	Example Problems	10-65
5.14.1	Example Problem 1 — Water Pressure	10-65
5.14.2	Example Problem 2 — Installation of Pump	10-67
5.14.3	Example Problem 3 — Pump Discharge	10-68
5.14.4	Example Problem 4 — Power Costs	10-70
5.14.5	Example Problem 5 — Well Discharge	10-72
5.14.6	Example Problem 6 — Discharge into Tank	10-74
5.14.7	Example Problem 7 — Flows and Head Losses	10-76
5.14.8	Example Problem 8 — Water Transmission Main	10-81
5.15	P. E. Problems	10-83
5.15.1	P. E. Problem 1 — Piping System	10-83
5.15.2	P. E. Problem 2 — Fluid Column	10-86
5.15.3	P. E. Problem 3 — Pump	10-88
5.15.4	P. E. Problem 4 — Pipe Flow Rate	10-91

CHAPTER 6

UNIFORM FLOW IN OPEN CHANNELS

6.1	Definitions	10-93
6.2	Channel Geometric Characteristics	10-94
6.3	Best Hydraulic Section (Most Efficient Cross Section)	10-95
6.4	Energy and Momentum in Open Channels	10-98
6.4.1	Energy in Open Channel Flow	10-98
6.4.2	Momentum in Open Channel Flow	10-101
6.5	Critical Flow	10-103

6.6	Uniform Flow	10-105
6.6.1	The Chezy Formula	10-105
6.6.2	The Manning Formula	10-105
6.6.3	Uniform Flow Computation	10-108
6.6.4	Design of Channels under Uniform Flow Condition	10-110
6.7	Example Problems	10-112
6.7.1	Example Problem 1 — Rectangular Concrete Culvert	10-112
6.7.2	Example Problem 2 — Flood Channel	10-114
6.7.3	Example Problem 3 — Concrete-Lined Irrigation Channel ...	10-116
6.7.4	Example Problem 4 — Triangular Channel	10-118
6.7.5	Example Problem 5 — Concrete Storm Sewer	10-119
6.7.6	Example Problem 6 — Rectangular Shaped Open Channel ..	10-120
6.7.7	Example Problem 7 — City Street Storm Sewer	10-122
6.7.8	Example Problem 8 — Semicircular Corrugated Metal Flume	10-124
6.7.9	Example Problem 9 — Culvert	10-127
6.7.10	Example Problem 10 — Water Supply Pipeline	10-130
6.7.11	Example Problem 11 — Storm Sewer Design	10-132
6.7.12	Example Problem 12 — Spillway Chute	10-133
6.8	P. E. Problems	10-136
6.8.1	P. E. Problem 1 — Concrete Trapezoidal Channel	10-136
6.8.2	P. E. Problem 2 — Culvert Design	10-138
6.8.3	P. E. Problem 3 — Natural Channel Meandering	10-141

CHAPTER 7

GRADUALLY VARIED FLOW IN OPEN CHANNELS

7.1	Basic Equations	10-145
7.2	Classification of Surface Profiles	10-146
7.3	Determination of Flow Profiles in Channels	10-148
7.3.1	Slope Change from Mild to Steep Slope	10-148
7.3.2	Slope Change from Steep to Mild Slope	10-148
7.3.3	Slope Change from Mild Slope to Milder Slope	10-149
7.3.4	Slope Change from Milder Slope to Mild Slope	10-149
7.3.5	Slope Change from Steeper Slope to Steep Slope	10-150
7.3.6	Slope Change from Steep Slope to Steeper Slope	10-150
7.3.7	The Backwater Curve	10-150
7.3.8	A Short Channel with an Upstream Sluice	10-151

7.4	Flow Computation by Direct Step Method	10-153
7.5	Hydraulic Jump	10-154
7.5.1	Physical Characteristics of the Jump	10-156
7.5.2	Location of the Jump	10-157
7.6	Hydraulic Design of Culverts	10-159
7.6.1	Types of Culvert Flow	10-159
7.6.2	Hydraulically Long and Hydraulically Short Culverts	10-159
7.6.3	Culverts Flowing with Inlet Control	10-159
7.6.4	Culverts Flowing with Outlet Control	10-160
7.7	Culvert Design Procedure	10-162
7.7.1	Culvert Flow Classification	10-163
7.8	Analysis of Existing Culvert	10-166
7.9	Example Problems	10-169
7.9.1	Example Problem 1 — Flow in Wide Rectangular Channel ...	10-169
7.9.2	Example Problem 2 — Weir Across Rectangular Channel ...	10-170
7.9.3	Example Problem 3 — Small Rectangular Concrete Flood Channel	10-172
7.9.4	Example Problem 4 — Capacity of Concrete Culvert	10-175
7.9.5	Example Problem 5 — Concrete Pipe Cross-Drain	10-176
7.9.6	Example Problem 6 — Concrete Channel Discharge	10-178
7.9.7	Example Problem 7 — Water Surface Profile	10-181
7.10	P. E. Problem	10-184
7.10.1	P. E. Problem 1 — Maximum Flow and Average Velocity	10-184

CHAPTER 8

HYDRAULIC SIMILITUDE

8.1	Introduction	10-187
8.2	Geometric Similarity	10-187
8.3	Kinematic Similarity	10-188
8.4	Dynamic Similarity	10-188
8.4.1	Reynolds Number	10-188
8.4.2	Froude Number	10-189
8.5	Applicable Scale Ratios	10-190
8.6	Example Problems	10-192
8.6.1	Example Problem 1 — Horizontal Rectangular Stilling Basin .	10-192
8.6.2	Example Problem 2 — Modeling a Spillway	10-194

CHAPTER 9

FLOW MEASUREMENT

9.1	Flow Measurements	10-197
9.2	Velocity Measurements	10-197
9.3	Discharge Measurements	10-198
9.4	The Venturi Meter, Orifice Meter and Nozzle Meter	10-200
9.5	The Weir	10-202
9.5.1	The Rectangular Weir	10-202
9.5.2	The Triangular Weir	10-202
9.5.3	The Trapezoidal Weir	10-203
9.6	Overflow Spillways	10-203
9.7	Example Problem	10-206
9.7.1	Example Problem 1 — Sharp-Crested Weir	10-206

CHAPTER 10

GROUNDWATER HYDRAULICS

10.1	Occurrence and Movement of Water under the Ground Surface in an Aquifer	10-207
10.2	Radial Flow to Wells	10-208
10.3	P. E. Problem	10-212
10.3.1	P. E. Problem 1 — Unconfined Aquifer	10-212

CHAPTER 11

ADDITIONAL PROBLEMS

11.1	P. E. Problems	10-215
11.1.1	P. E. Problem 1 — Hydraulic Jump	10-215
11.1.2	P. E. Problem 2 — Pipe Flow Problem	10-218
11.1.3	P. E. Problem 3 — Culvert Design	10-222
11.1.4	P. E. Problem 4 — Flow Through Connected Reservoirs	10-224
11.1.5	P. E. Problem 5 — Hardy-Cross Method	10-225

CHAPTER 12

EXAMPLE MULTIPLE CHOICE PROBLEMS

12.1	Example Multiple Choice Problems	10-231
12.1.1	Example Problem 1 — Flow Rate of Oil in Pipe	10-231
12.1.2	Example Problem 2 — Flow Rate in a Pipe	10-233

12.1.3	Example Problem 3 – Reservoirs	10-235
12.1.4	Example Problem 4 – Rectangular Concrete Culvert	10-237
12.1.5	Example Problem 5 – Flodd Channel	10-239
12.1.6	Example Problem 6 – Discharge Before and After Development	10-241

CHAPTER 13

MISCELLANEOUS DESIGN TABLES

13.1	Miscellaneous Design Tables	10-246
------	-----------------------------------	--------
